## **UBIQUE COMPLETES DANIEL'S HARBOUR ZINC PROJECT FIELD SURVEYS AND SAMPLING PROGRAM**

Toronto, Ontario, October 26, 2023 – Ubique Minerals Limited (“Ubique” or the “Company”) (CSE:UBQ) (FRA:2UM) is pleased to announce that it has completed the field work portion of its overall expanded Daniel’s Harbour zinc project and has dispatched soil samples to a local laboratory for analyses. Geologic compilation is underway and the geologic interpretation will be integrated with the new geochemical results on receipt, plus prior geochemical results and historic surveys.

As announced in the press release of September 21, 2023 the company has consolidated several Mineral Licenses covering the area of historic zinc mining and extensions along strike for almost 20 kilometres in a northeasterly direction along the trend of the zinc deposits. The mining operation from 1975 till 1990 extracted almost eight million tons of high grade sphaleritic ore with an average grade of almost 8% zinc. Clusters of zinc deposits, zinc float boulders and soil zinc geochemical anomalies are known throughout the length of the property.

A contractor was retained to undertake geochemical surveys in areas previously un-surveyed and to link up with existing surveyed areas where anomalies are open-ended. Company geologists investigated geologic features and areas of possible interest based on historic reports. The geology is being compiled into an integrated map of the whole property highlighting the features known to be associated with the zinc deposits to locate the most favorable target areas for new zinc deposits that either occur at surface or at very shallow depths such that open pit mining would be practical.

The attached map shows the excellent location of this property with a paved road right onto the property and gravel roads giving good access to the rest of the property.

### About Daniel's Harbour project

The Daniel's Harbour properties of Ubique cover both the area of the past producing high grade zinc mine and extensions of favorable area, mostly to the north-northeast along strike for more than ten kilometers. Exploration drilling to date has confirmed three zinc deposits and has indications of two more which require additional definition drilling to define their extents. Several more zones identified by one or more historic drill holes require relocating and further drilling to confirm. As the deposits are long, narrow and flat lying-in shape and orientation, within flat lying dolomitic sedimentary rocks they may extend across more than one blocks of claims and therefore the ability to consolidate the property position will assist in exploration execution.

On behalf of the board of directors,

*Vilhjalmur Thor Vilhjalmsson*  
 CEO and Chairman

## About Ubuque Minerals Limited

Ubuque Minerals Limited is an exploration company listed on the CSE (CSE:UBQ) focused on exploration of its Daniel's Harbour zinc property in Newfoundland and is also engaged in exploration in Namibia, Africa along with actively searching for other projects around the world. Ubuque became a publicly listed company in September 2018. Ubuque has an experienced management group with a record of multiple discoveries of deposits worldwide and owns an extensive and exclusive database of historic exploration results from the Daniel's Harbour area.

Dr. Gerald Harper, P.Geo.(NL), director of Ubuque, is the qualified person as defined by NI 43-101 responsible for the technical data presented herein and has reviewed and approved this release.
